The present invention relates to an isolated nucleic acid comprising a nucleotide sequence coding for a full-length mammalian GM3 synthase or their biologically active polypeptide fragment. It is also useful as a size marker in nucleic acid or protein electrophoresis or chromatography and for detecting expression of sialyltransferase (ST) in whole organs, tissue or calls. The nucleic acid probes can also be used to detect, quantitate or isolate a mammalian sialyltransferase homologues, as cest sample or to identify sialyltransferase homologues, as oligonucleotide probe e.g. in polymerase chain reaction differential display, in combination with cDNA libraries, expression libraries, etc. The nucleic acid can be modified to make it resistant to cellular enzymes, oxidation, reduction, nucleasses, etc. Or to enhance its uptake
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; sialyltransferase; GM3-synthase-specific immunogenic activity; 4ST3GalIIH domain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              295
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     496
 The present invention relates to an isolated nucleic acid comprising a nucleotide sequence coding for a full-length mammalian GM3 synthase or their biologically active polypeptide fragment. It is also useful as a size marker in nucleic acid or protein electrophoresis or chromatography
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mouse; stalyltransferase; GM3-synthase-specific immunogenic activity;

and for detecting expression of sialyltransferase (ST) in whole organs, tissue or cells. The nucleic acid probes can also be used to detect, quantitate or isolate a mammalian sialyltransferase nucleic acid in a test sample or to identify sallyltransferase homologues, as oligonucleotide probe e.g. in polymerase chain reaction differential display, in combination with CDNA libraries, expression libraries, etc. The nucleic acid can be modified to make it resistant to cellular enzymes, oxidation, reduction, nucleases, etc. Or to enhance its uptake into cells. The present sequence is mouse sialyltransferase, 48T3 Gal VI
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   363
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 395

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity.
                                                                                                                                                                                                                                                                                                                                                                    seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqp-emb1/AA2001.DAT:ABG18000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.

The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human hote: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 82 GGTACCAGCCTCCAGCCTGCCCCAGGACTGCCCTGACCCAGGCGCGCC 131

                                                                                                                                                                                                                  The present invention relates to an isolated nucleic acid comprising a nucleotide sequence coding for a full-length mammalian GM3 synthase or their biologically active polypeptide fragment. It is also useful as a size marker in nucleic acid or protein electrophoresis or chromatography and for detecting expression of stalyltransferase (ST) in whole organs, tissue or calls. The nucleic acid probes can also be used to detect, quantitate or isolate a mammalian sialyltransferase nucleic acid in a test sample or to identify sallyltransferase homologues, as oligonucleotide probe e.g. in polymerase chain reaction differential display, in combination with cDNA libraries, expression libraries, etc. The nucleic acid can be modified to make it resistant to cellular enzymes, oxidation, reduction, nucleases, etc. Or to enhance its uptake introcells.
                                                                                                Mouse; sialyltransferase; GM3-synthase-specific immunogenic activity;
                                                                                                                                                                                                                                                                                                                                                                                                                                Isolated nucleic acid useful for coding a full-length mammalian GM3 synthase or its biologically active polypeptide fragment, useful for detecting expression of sialyltransferase in whole organs, tissue or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      394 TGTGACCTTTGTGCCATAGTGTCAAACTCAGGTCAGATGGTTGGCCAGAA 443

```
The present invention relates to an isolated nucleic acid comprising a nucleotide sequence coding for a full-length mammalian GM3 synthase or their biologically active polypeptide fragment. It is also useful as a size marker in nucleic acid or protein electrophoresis or chromatography and for detecting expression of slalyltransferase (ST) in whole organs, tissue or cells. The nucleic acid probes can also be used to detect, quantitate or isolate a mammalian slalyltransferase nucleic acid in a test sample or to identify slalyltransferase homologues, as coligonuclectide probe e.g. in polymerase chain reaction differential display, in combination with cDNA libraries, expression libraries, etc. The nucleic acid can be modified to make it resistant to cellular contains and contains and contains and contains and contains. The present sequence is rat 4ST3GalIIR domain of sallyltransferase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Isolated nucleic acid useful for coding a full-length mammalian GM3 synthase or its biologically active polypeptide fragment, useful for detecting expression of stalyltransferase in whole organs, tissue or cells -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Rat; sialyltransferase; GM3-synthase-specific immunogenic activity; 4ST3GalIIR domain.
                                                                                                                                                                                                      seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqp-emb1/AA2001.DAT:AAE10713

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents the human alpha2-6 sialate transferase. The invention relates to a method for the preparation of sialate transferase. In the method, E. coll is transformed with an expression vector containing a sialate transferase gene and a maltose-combined protein gene, the transformant is cultured to form sialate transferase, and sialate transferase is collected from the culture. The method can express sialate transferase as an active soluble protein and can prepare sialate transferase easily and efficiently in a large amount.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqp-emb1/AA1999.DAT:AAY39959

(EC 24.99.1). It was decoded from the appropriate cDNA. the method of the invention is used to produce membrane-bound mammalian alycosyltransferase and variants, using transformed yeasts. It is less time consuming than natural source isolation and chemical methods.
                                                                                                                                                                                                                                                                                                                                           cells with expression cassettes contg. mammalian coding sequences controlled by yeast promoters
                           glycosyltransferase; galactosyltransferase; sialyltransferase; furosyltransferase; membrane bound; ss.

Hybrid proteins (AAR55708, AAR55709) comprising membrane-bound or soluble derivatives of galactosyltransferase linked to soluble ST were prepared in Saccharomyces cerevisiae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Proteins with glycosyl transferase activity - useful for synthesis or modification of glyco-proteins, glyco-lipid(s) and oligosaccharide(s)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Galactosyltransferase; sialyltransferase; hybrid protein; glycosyltransferase; glycosprotein; glycolipid; oligosaccharide; HepG3; Escherichia coli; pSIA2; glycosylation; Saccharomyces cerevisiae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ...PhePheAsnAsnTyrLysThrTyrArgLysLeuHisProAsnGlnPr 292

```
The DNA sequence is expressed in eukaryotic cells (e.g. 3MK1-3-B11 cells), resulting in slalylation of the glycoprotein. The process may be used to produce slalylated recombinant forms of glycoproteins such as antithrombin III, erythropoietin, factor VII, factor VIIIc, factor IX, tissue factor, interleukin receptors, TNF receptor of CD4, or slalylated monoclonal antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqp-emb1/AA1992.DAT:AAR28839

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Key
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      13
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 sequences (ABL01840-ABL16175) and the encoded proteins
(ABB57737-ABB72072).
The sequence data for this patent did not form part of the printed
specification, but was obtained in electronic format directly from WIPO
at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins

The nucleic acids, proteins, antibodies and (ant) agentication.

The nucleic acids, proteins, antibodies and (ant) agentication.

In the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrend gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital;

(b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic ansemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. crebral anoxia and parasitic infections.

Only wound healing; (e) neurological diseases such as viral, bacterial, fungal and parasitic infections.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published\_pct\_sequences. The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases Claim 11; SEQ ID NO 6482; 1701pp + Sequence Listing; English. ```
The present invention relates to secreted and transmembrane proteins. These proteins and the DNA encoding them may be used as hybridization probes, in chromosome and gene mapping and in the generation of anti-sense RNA and DNA. They may also be used used to generate either transgenic animals or knockout animals which are in turn useful for development and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             398 ACCTTTGTGCCATAGTGTCAAACTCAGGTCAGATGGTTGGCCAGAAGGTG 447

```
The polynucleotide sequences given in AAA39052 to AAA39088 encode the human secreted proteins given in AAB08891 to AAB08984. The human secreted proteins given in AAB08891 to AAB08984. The human secreted proteins can have activities based on the tissues and cells they are expressed in. Examples of the activities are: cytostatic; anti-proliferative; immunosuppressive; antibacterial; and vulnerary. The secreted proteins and their related polynucleotide sequences are useful for diagnostic and therapeutic methods useful for diagnosting and treating disorders related to the secreted proteins. The proteins, and comply the secreted proteins of the proteins, and comply the secreted proteins of the proteins of the proteins of disorders, infectious disease, regeneration of tissues, for chemotaxis and for screening molecules that bind to the proteins or polynucleotide sequences may be used as food additives or preservatives, to increase or decrease storage capabilities, fat content, liptd, protein, carbohydrate, vitamins, minerals, co-factors or other nutritional components. Agonists or antagonists of the proteins may be used to prevent scar tissue growth during wound healing, and hyper-vascular diseases. AAA39031 to AAA39031 and AAB08890 are sequences used in the exemplification of the present

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an Oligo-dr primer and an Oligonucleotide comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprision a sequence complementary to the comprises an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the comprises a 1'-end sequence, where the combination of the 5pecification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs. The primers allow obtaining of the full-length CDNAs easily without any specialised methods. AAH03166 to AAH13629 to AAH13620 to AAH3620 to AAH3
                       Primer sets for synthesizing polynucleotides, particularly the 5602 full-length cDNAs defined in the specification, and for the detection and/or diagnosis of the abnormality of the proteins encoded by the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                      105
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            548
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               648
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                171
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       798
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequences AAU29024-AAU29328 represent PRO polypeptides of the invention. The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of actor control sample of normal calls, whereby a higher level of and a control sample of normal calls, whereby a higher level of expression in the test sample indicates the presence of a tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats and rabbits but are preferably human. The polypeptides can be used to stimulate tumour necrosis factor (TNF) alpha release from human blood, when contacted with it. A specific polypeptide can be used to stimulate the proliferation or differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also susceptibility to tumour development, particularly adrenal, ung, colon, creast, prostate, rectal, cervical, or liver tumours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel nucleic acids encoding PRO polypeptides, used to diagnose the presence of tumours, such as prostate and breast tumours, in mammals and to screen for modulators of the compounds -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           A CONTRACTOR OF A CONTRACTOR OF A CONTRACTOR A CONTRACTOR
                                                                                                                                                                                                                                                                                                                                                                                                       AAA37022 to AAA37144 encode the new isolated human transmembrane, receptor or secreted PRO polypeptides given in AAY99340 to AAY99462. The transmembrane and receptor PRO proteins can be used for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions. The polypeptides and nucleotide sequences encoding then have various industrial applications, including uses as pharmaceutical and diagnostic agents. AAA37145 to AAA37330 represent PCR primers and hybridisation probes used in the isolation of the PRO polypeptides from the present invention.
                                                                                                                                                                                                                                                     New mammalian DNA sequences encoding transmembrane, receptor or secreted PRO polypeptides, useful for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous asystem, such as peripheral nervous injuries, peripheral nervous asystem diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                Note: The sequence data for this patent did not form part of the printed

The invention relates to human nucleic acids (AAL57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nerropathy and localised neuropathies and central nervous system diseases, such as Labelmer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/Anhibin activity, chemclactic/Chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Note: The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                               Wang D;

```
AAC7446 to AAC77606 encode the proteins given in AAB40237 to AAB43397,
which represent the human ORFX open reading frames 1 to 3161. The ORFX
sequences have activities such as: cytostatic; hepatotropic; vulnerary;
sequences tational antiparkinsonian; nootropic; neuroprotective;
osteopathic; anticonvulsant; antiarthritic; immunosuppressant;
immunostimulant; cardiant; thrombolytic; coagulant; vasotropic;
antidiabetic; hypotensive; dermaclogical; immunosuppressive;
antidiabetic; hypotensive; and nucleic acide may be used to treat cancers,
broliferative disorders, neurodegenerative disorders, osteoarthritis,
cyctors. The proteins and nucleic acide may be used to treat cancers,
proliferative disorders, neurodegenerative disorders, systemic lupus
cyctors. The proteins and nucleic acide may be used to treat cancers,
cyctors, the proteins and nucleic acide may be used to treat cancers,
cyctors, the proteins and nucleic acide may be used to treat cancers,
cyctors, the proteins and nucleic acide may be used to treat cancers,
cyctors, the proteins and uncleic acide may be used to treat cancers,
cyctors, the proteins and nucleic acide may be used to treat cancers,
cyctors, the proteins and nucleic acide may be used to treat cancers,
cyctors, the proteins and nucleic acide may be used to treat cancers,
cyctors, the proteins and nucleic acide may be used to treat cancers,
cyctors, the proteins and nucleic acide may be used to treat cancers,
cyctors, the proteins and nucleic acide may be used to treat cancers,
cyctors, the proteins and nucleic aci

The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as Alzheimer's, Parkinson's disease, minington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/Anhibin activity, chemotactio/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The sequence data for this patent did not form part of the printed

                                                                                                                       nucleotide sequence coding for a full-length mammalian GM3 synthase or size marker in nucleotide regiment. It is also useful as a size marker in nucleic acid or protein electrophoresis or chromatography tissue or clin mucleic acid or protein electrophoresis or chromatography tissue or cells. The nucleic acid probes can also be used to detect, and test sample or to identify siallytransferase homologues, as oligonucleotide probe e.g. in polymerase chain reaction differential display, in combination with cDNA libraries, expression libraries, etc. The nucleic acid can be modified to make it resistant to cellular encombination, reduction, nucleases, etc. Or to enhance its uptake enzymes, oxidation, reduction, nucleases, etc. Or to enhance its uptake into cells. The present sequence is human sialyltransferase, 7576 Gal V
                                                           present invention relates to an isolated nucleic acid comprising
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              623
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                773

The invention relates to human nucleic acids (AAIS7798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to creat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous system diseases, such as localised neuropathies and central nervous system diseases, such as lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The sequence data for this patent did not form part of the printed
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ä

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 703
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           the polynucleotide sequence given in AAA78381 to AAA78432 encode the human secreted proteins given in AAB24437 to AAB24604. Human secreted proteins given in AAB24437 to AAB24604. Human secreted proteins have activities based on the tissues and cells the genes are expressed in Examples of activities include: cytostatic; antianaemic; antidiabetic; antinflammatory; ophthalmological; antirheumatic; antidiathritic, antiposofiatic; antimicrobial and antiparkinsonian.

Contropic; neuroprotective; antimicrobial and antiparkinsonian.

Human secreted protein polynucleotides, polypeptides, antagonists and/or agonists may be useful in treating, preventing, and/or diagnosing other discases, and/or conditions such as: (a) cancers; (b) discases of the immune system; (c) angiogenesis disorders; (d) diseases hyperproliferative disorders; (e) cardiovascular disorders; (f) diseases aspeptosis; (g) neurological diseases; and (h) infectious diseases. They are also used to promote wound healing.

AAA78372 to AAA78380 and AAB24436 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              무
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           y seven human nucleic acids encoding secreted proteins, useful ir treatment, prevention and diagnosis of cancers, disorders of the ine system, anglogenesis disorders, neurological diseases and
antipsoriatic; antiangiogenic; cardiant; anti-HIV; nootropic; neuroprotective; antimicrobial; antiparkinsonian; cancer; immune system disorder; anglogenesis; hyperproliferative disorder; cardiovascular disorder; apoptosis; neurological disease; infectious disease; wound healing; chromosome 9.
                                                                                                                                                                                                                                                                                                                                                                                                                             Endress GA, Soppet DR, Ni J;

The protein and nucleic acids may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate protein expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               49 Secreted proteins and the nucleic acids encoding them; useful in gene therapy and for detecting similar sequences in samples -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   seq_name: /SIDS1/gcgdata/hold-geneseq/geneseqp-emb1/AA2001.DAT:AAB75350
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Secreted protein; prevention; treatment; diagnosis; disease;

```
The present invention relates to human proteins (AAB61608-AAB61617) and their coding sequences (AAF28679-AAF28698). The proteins of the present invention have hydrosphobic domains and can be used for the treatment of various immune deficiencies and disorders, such as severe combined immunodeficiency (SCID), multiple sclerosis, rheumatoid arthritis, autoimmune pulmonary inflammation, graft-versus-host disease and Guillain-Barre syndrome. The proteins may also be useful in the treatment of allergic reactions and conditions, such as asthma and in requiation of allergic reactions and conditions, such as asthma and in requiation of allergic reactions and conditions, such as asthma and in requiation of allergic reactions are seen as a second as a second and or requested for bone, cartilage, tendon and/or nerve tissue growth or regeneration as well as wound healing and in the treatment of burns. The proteins may be used in the treatment of product toother uses and in other toother repair processes. Other uses include treatment of thrombolytic and haemostatic conditions, treatment of thrombolytic and haemostatic conditions, treatment of thrombolytic and haemostatic conditions, viruses,
                                                                                                                                                                                                                                                New human proteins with hydrophobic domains, useful for the treatment of immune disorders, tumors, allergic conditions, thrombosis and microbial infection -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         318 CTACACATACA......GGCGGCCCCTTCGAACTCACTATGGAT 355

```
This sequence represents a human secreted protein amino acid sequence.
The invention relates to sequences AAA87725-A8774 which encode human secreted proteins AAB25763-B25812. The proteins include signal peptides.
Included in the invention are a host cell containing one of the cDNA sequences, and a purified antibody capable of binding to one of the secreted proteins. Also contained in the invention are methods for storing the sequence data on a computer system, and a method for identifying features of the cDNA sequences using a computer programme. The cDNAs are useful for expressing secreted proteins of fragments to obtain antibodies capable of specifically binding to the secreted proteins. The cDNAs may also be useful in diagnostic, forensic, gene therapy and chromosome mapping procedures and may be used to design expression vectors and secretion vectors. The proteins of the invention may be used to treat diseases including cancer, autoimmune diseases, cardiovascular disorders, cystic fibrosis, hypothyroidism, immunological disorders, amyloidosis, brain disorders, skeletal muscle disorders, eye disorders, analyloidosis, brain disorders, siabetes, atherosclerosis, neurodegenerative disorders, gettic fibrosit, Alzheimer's disease, considered and impotence.
                                                                                                                                                 chromosome mapping; cancer; autoimmune disease; cardiovascular disorder; cystic fibrosis; hypothyroidism; immunological disorder; amyloidosis; brain disorder; skeletal muscle disorder; eye disorder; obesity; mitochondriocytopathy; diabetes; atherosclerosis; Alzheimer's disease; neurodegenerative disorder; graft rejection; dementia; hyperlipidaemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Polynucleotides and polypeptides encoding proteins with signal peptides, useful in diagnostic, forensic, gene therapy and chromosome
                                                                                                                               Human; secreted protein; forensic procedure; gene therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            230 TGCTGG......TTGTGCGTCTTGTAAATGAAGTGAATTTCCCA 267
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Percent Identity: 41.148

The present invention relates to the isolation of novel human enzyme polypeptides, and the CDNA (AAS40785-AAS41684) and genomic sequences encoding them. The enzyme polypeptides of the invention may comprise the functional classes of oxidoreductases, transferases, hydrolases, lyases, isomerases or ligases. The sequences of the invention are useful in the diagnosis, treatment, prevention and/or prognosis of a wide range of anisorders including hyperproliferative disorders (e.g. cancer), immunodeficiency disorders (e.g. ALDS) autoimmune disorders (e.g. arthritis), neurological disorders (e.g. Alzheimer's disease), metabolic disorders (e.g. athma), cardiovascular disorders (e.g. atherosolerosis), blood-related disorders (e.g. themophilia), reproductive disorders (e.g. athma) and infectious disorders (e.g. infertility) and infectious disorders (e.g. infertility) and infectious alsorders (e.g. Influenza). The polynucleotides of the invention can also be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                           preventing, treating neural, immune system, muscular, reproductive, pulmonary, cardiovascular, renal, proliferative disorders and cancerous
                                                                                                                                                                                                                                                                                        Novel polypeptides and polynucleotides useful for diagnosing,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         76 TGCCGTGGTACCAGCCTCCAGCCTGCCCCCAGGACTGCCCCTGACCCAGG 125

```
The polynucleotide sequence given in AAA78381 to AAA28432 encode the human secreted proteins given in AAB24437 to AAB24604. Human secreted proteins have activities based on the tissues and cells the genes are expressed in. Examples of activities include: cytostatic; antianaemic; antidiabetic; antiporiatic; obthalmological; antirheumatic; antiantianglogenic; cardiant; anti-HIV; nootropic; neuroprotective; antimicrobial and antiparkinsonian. Human secreted protein polynucleotides, polypeptides, antagonists and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Forty seven human nucleic acids encoding secreted proteins, useful in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the treatment, prevention and diagnosis of cancers, disorders of the immune system, angiogenesis disorders, neurological diseases and hyperproliferative disorders

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nocturple; neuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; immunosuppressant; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive; antidiabetic; hypotensive; dermatological; antifungal; antithenmatory; antidabetic; predisposition to, or preventing or treating pathological conditions associated with an ORFX-associated disorder. The nucleic acids can be used to express ORFX proteins in gene therapy. WPI; 2001-425874/45. N-PSDB; AAD09952 Drug metabolizing enzymes and encoding polynucleotides, useful for diagnosing, treating and/or preventing autoimmune, inflammatory, cell proliferative, developmental, endocrine, eye, metabolic, and jastrointestinal disorders

Claim 1; Page 150; 133pp; English.

The present sequence is human drug metabolising enzyme (DME-17) protein. Human DME and its nucleic acid molecule are useful for the diagnosis, treatment and prevention of disorders associated with increased or decreased expression of DME. Examples of such disorders include, autoimmune/inflammatory disorder such as acquired immune deficiency syndrome (AIDS), rheumatoid arthritis, osteoporosis; cell proliferative disorder such as actinic Keratosis, atheroscierosis; developmental disorder such as epilepsy, anemia; endocrine disorder such as acromegaly, cretinism, thyrotoxicosis; pancreatic disorder such as acromegaly, cretinism, thyrotoxicosis; pancreatic disorder such as metabolic disorder such as Addison's disease, obesity; gastrointestinal disorder such as anorexia, dysphagia and hepatic tumours including nodular hyperplasia, adenomas and carcinomas. DME DNA is useful for

seq\_documentation\_block:

```
creating 'knockin' humanised animals (pigs) or transgenic animals (mice or rats) to model human disease. DME DNA is also in useful is gene therapy. DME DME and its immunogenic fragments are useful for screening libraries of compounds in several drug screening assays.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     415

can be used to

rabbits but are preferably human. The polypeptides

stimulate tumour necrosis factor (TNR) alpha release from human blood, when contacted with it. A specific polypeptide can be used to stimulate the prolliferation or differentiation of chondrocyte cells. The PRO proteins can be used to determine the presence of tumours and also susceptibility to tumour development, particularly adrenal, lung, colon, breast, prostate, rectal, cervical, or liver tumours, in mammalian subjects. The oligonucleotide probes specific for the PRO nucleic acids can be used for genetic analysis of individuals with genetic disorders.

Sequences AAU29024-AAU29328 represent PRO polypeptides of the invention. The PRO polypeptides and their associated nucleic acids can be used to detect the presence of a tumour in a mammal by comparing the level of expression of a PRO polypeptide in a test sample of cells from the animal and a control sample of normal cells, whereby a higher level of expression in the test sample indicates the presence of a tumour in the mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats Novel nucleic acids encoding PRO polypeptides, used to diagnose the presence of tumours, such as prostate and breast tumours, in mammals and to screen for modulators of the compounds -Claim 11; Fig 536; 774pp; English.
